### Reason for Allowability

The following is an examiner's statement of reasons for allowance: the primary reason for the allowance is the including, in combination with other limitations recited in the claims, the features of an annular securing disk (20) made of a ferromagnetic material having projecting portions (34) extending radially inward into the internal recess of the inner stator, and the projecting portions having a bent portions serving as barbs (34') engaging into the outer side of the bearing support tube (38) to prevent axial separation of the stator from the bearing support tube.

Comparing to the prior-art of the record, the most relevant refs are Wrobel and Harada disclose the stator support with radially projections engaging into the grooves. However, the refs do not disclose the bent barbs, or diagonally upward barbs, as in the claimed invention.
